

Who we are

Sportlink was founded with a focused objective, to provide high quality, cardiovascular-focused sports physicals to student athletes in a convenient and cost-effective manner.

What we offer

High Quality

National Standards - Sportlink's exam follows guidelines set forth by the five major medical academies in the United States; the American Heart Association also endorses it.

Cardiac Ultrasound - We measure parts of the heart that may help detect structural abnormalities and prevent the leading causes of sudden death in athletes.

Low Cost

\$39⁹⁹ - Because of our efficient process we are able to offer high quality exams at a significantly lower price compared to a typical doctors office visit, which averages \$65 or more.

Convenience

Onsite Exams - Events are held at the school to provide maximum convenience and availability for the students and parents.

Web Scheduling - Appointments are scheduled via Sportlink's secure online scheduling tool minimizing the workload of school staff and faculty.

Exam Details:

- Physical Exam
- Medical History Review
- Cardiac Ultrasound
- Vision Screening
- Strength and Flexibility Assessment
- Body Fat Analysis
- Musculoskeletal Evaluation
- Blood Pressure and Pulse
- Height and Weight Measurements
- Body Mass Index

How we work with your school

Sportlink enters into a “hand-shake” agreement with schools before providing services. We have contracts in place for schools that prefer a more formal agreement.

What Sportlink Provides

- Newsletter inserts/advertisements
- Online scheduling
- Staffing for physicals & ultrasound screen
- Sufficient equipment for screenings
- Pipe and drape for privacy
- Physician recommendation for clearance
- Completed physical forms to school
- Excel spreadsheet with student results

School Requirements

- Distribute supplied inserts to students
- Distribute history forms to students
- Sizable location for exams
- Tables, chairs, access to electricity & waste
- School contact present for event
- Minimum of 30 participants

“Sportlink uses the cardiac ultrasound screen to identify hypertrophic cardiomyopathy and dilated aortic roots – two causes of sudden death in athletes. It is intended to provide a more complete cardiovascular sports exam in an affordable school setting.”

Alex DeJong, D.O., J.D.
Sportlink Medical Director
